The sequence was derived from the DNA encoding natriuretic peptide receptor B, NPRB, having quanyl cyclase (GC) activity and protein kinase activity. The DNA can be inserted into expression vectors for the produ. Of the protein, opt. after being mutated to produce NPRB analogues. The protein has a mol wt. of 115 kD (calculated Mr-114,952). The protein (or variants) can be used in treatment of matriuretic peptide disorders, and also to isolate peptides using affinity chromatography. Antibodies with affinity for NPRB can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               185 TTTTGGTGTATGAACTGTAGTCCTAGAGGATTTTATTAGTTATGAGTTCTATAACTAAGA

                                                                                                                                                                                                                                                       WPI; 88-279927/40.
Introducing random point mutations into nucleic acods -
by prepn of single stranded template, annealing a primer, elongation, misincorporation, completion of molecules and screening.
                                                                                                                                                                                                                                                                                                                                                           Random point mutations were introduced into the alpha fragment of Erodia beta-galactosidase. The wild type sequence was obtained as a single stranded template and an oligonucleotide was hybridised to it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3 ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Oligonucleotide probe MKI4-A consists of nucleotides 5-95 of MKI4 (Q51735). It hybridized to all spp. of mycobacteria tested, but cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

Introducing random point mutations into nucleic acods -

Introducing random point mutations into nucleic acods -

Thy prepr of single stranded template, annealing a primer, elongation,

misincorporation, completion of molecules and screening.

Disclosure; p; English.

Random point mutations were introduced into the alpha fragment of

E. Coll beta-galactosidase. The wild type sequence was obtained as a
single stranded template and an oligonucleotide was hybridised to

it to generate a popn of DNA molecules which terminate at all

c possible nucleotide positions within a specified region. The

variable 3' ends generated in this way are used as primers for

reverse transcriptase. Nucleotides are misincorporated by the

transcriptase and the molecules are completed to forms that can be

amplified and then expressed in a suitable host-vector system.

The sequence covers all 176 difft base substitutions, most of which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

It hybridized to all spp. of mycobacteria tested, larges reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also 051735-45 and 051747-59.

070468 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides This generic formula can also be represented as follows: X(NNB)11(TGC)(NNB)6Z(NNB)7(TGC)(NNB)10Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in Q70466-68.

Other specific peptides generated by these generic sequences are shown in R55151-54. TSARs are concatenated heterofunctional proteins or peptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                have designed activity

They may further comprise a linker peptide between the 2 domains. The oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARS or compans, comprising a TSAR binding domain can be used in vivo to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     deliver a chemically or biologically active molety, eg. metallion, radioisotope, peptide, toxin or enzyme, to the specific target or on teal. They can also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need

screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain proteins comprising a binding domain and an effector domain broteins of 2016 of 20 separate page 35, 25pp; English.

O70466 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affainty Reagents) peptides. This generic formula can also be represented as follows:X(NNB)1(TGC)(NNB)10(TGC)2(NNB)4X(NNB)8(TGC)(NNB) (TGC)2(NNB) (TGC)2 (NNB) (TGC)2 (TNB) (TG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   need for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARs or compress. comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                908 GCATCAATIGGGGCCGTGTGGTGGCTCTTCTGGGCTTCAGCTACCGTCTGGCCCTACACA 967

heart, Lambda ZAP Express vector-Lambda ZAP Express host-E. coll XL1-Blue Raitel-Ecorl Rsite2-Xhol mRNA was purified from human fetal hearts (8-10 weeks). CDNA was synthesized using a Xhol-Oligo diaptor-primer. Ecorl adaptors were ligated, followed by digestion with Xhol, for directional cloning into predigested lambda ZAP Express.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 (bases 1 to 270)

rat primer=M13 Reverse library=Rat PC-12 cells, untreated vector=pBluescript SK- Rsitel=EcoRI Rsite2=XhoI poly(A)+ RNA was purified from untreated PC12 cells cultured for 9 days. cDNA was constructed using an oligo-dr primer and directionally cloned using the Lambda ZAP II Vector Kit by Stratagene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eukaryotae; mitochondrial eukaryotes; Metazoa; Chordata; Vertebrata; Mammalia; Eutheria; Rodentia; Sciurognathi; Myomorpha; Muridae; Murinae; Rattus.

Library went through one round of normalization. Library constructed by Bento Soares and M.Fatima Bonaldo.

Second strand was prepared using RNase H and DNA polymerase I. ECOR I adapters were ligated to the cDNA, and it was digested with Xho I. Prepared fragments were ligated into ECOR I + Xho I digested lambda ZAP II vector."

/note="Vector: Lambda ZAP II; Site_1: ECOR I; Site_2: Xho I; PolyA+ RNA, from asynchronous blood stage parasites of the Da2 isolate cultured in vitro, was reverse transcribed using an oligo dT-Xho I primer. Second strand was prepared using RNase H and DNA polymerase I. ECOR I adapters were ligated to the CDNA, and it was digested with Xho I. Prepared fragments were ligated into ECOR I Xho I digested lambda ZAP II vector. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

protein

State of the sequence represents a bcl-1 homologue which

This Bak-2 protein sequence represents a bcl-1 homologue which

Interacts with Epstein-Bar virus (EBV) early lytic cycle BHRF1

Crossin and is capable of modulating apoptosis. The protein may

Exportein, and is capable of modulating apoptosis. The protein may

Crossin in a new virucide drug screening method, which involves

Combination of Bak-2 protein and a viral protein (e.g. EBV BHRF1),

Combination of Bak-2 protein and monitoring for disruption of the

interaction, e.g. by co-precipitation, protein interactive trapping

or ELISA. Interaction of Bak-2 and viral proteins allows viral

creplication or latency in the absence of apoptosis. Compounds which

inhibit the interaction may be used as virucide, antitumour or ning for anti-viral agents – by detecting the ability of an to disrupt the interaction of a Bak protein and a viral Bak-2 protein.                                                                                                                                                                                                                                                                                                                                                                                    Cdn-2 CDNA was isold. from a human placental genomic library using a 950 bp fragment of Cdn-1 CDNA. Expression of Cdn-2 in mouse progenitor B-cell FL5.12 cells decreased IL-3-induced apoptosis. The Cdn-2 protein displayed 97% amino acid identity with Cdn-1 (R77876).

New nucleic acid sequences encoding Cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 masgqqpppprqecgepalpsaseeqvaqdteevfrsyvfyrhqqeqeaegvaapadpem 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This Bax protein sequence represents a bcl-1 homologue which interacts with Epstein-Barr virus (EBV) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion protein, in a new virucide drug screening method, which involves combination of Bak protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak and viral proteins allows viral
                                                                                                                                                                                                                                                                                                                     Can-l cDNA was isolated from a human heart cDNA library using a previously isolated clone as probe. Recombinant Can-1 was produced in Sf9 and human colon adenocarcinoma HT29 cells. Expression of cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; Bak; apoptosis; latency; virus replication;

Bcl-Y protein (R81451) is a member of the Bcl-2 family and can induce apoptosis in cells and function as a negative regulator of Bcl-2 function. Bcl-Y mRNA was detected in all human tumour cell lines examined and is also widely expressed in primary human tissues. It can be obtd. by expression of a full-length cDNA clone (T17375) in pref. mammalian host cells. Bcl-Y can be used to develop prods. for treating disorders associated with inappropriate cell proliferation or cell death, and to raise antibodies used for

New nucleic acid sequences encoding Cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 mvtlplqpsstmgqvgrqlaiigddinrrydsefqtmlqhlqptaenayeyftkiatslf 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-ras-mediated apoptosis. Deletion of the N-terminal 59 amino acids of Cdn-1 only slightly decreased this activity, suggesting that small, truncated Cdn-1 Sequence 152 AA;

antibodies, useful in assay and for control of cell death in e.g. antibodies, useful in assay and for control of cell death in e.g. neuronal cells, lymphocytes and cancers
claim 4; Page 87; 127pp; English.
This protein may be expressed recombinantly, particularly with pcmV plasmids as vectors for expression in mammalian cell cultures.
The protein has particular application in cancer cells (failure of programmed cell death (PCD)) or neurodegenerative and autoimmune diseases
                                                                                                                                                                                                                                                                                                Chinadural G;

WPI; 96-427055/43.

WRIGH acids encoding apoptosis regulating proteins - useful for diagnosing and treating immune disorders, malignancies, etc.

Example 8; Page 34-35; 60pp; English.

CC The 80-6 mutant (W01020) of the bcl-2 oncogene product (W01018)

CC lacks amino acids 80-86 of the native protein. This and other

CC Bcl-2 mutants (see also W0109-21) were used in a two hybrid assay

CC examine the interactions between Bcl-2 and novel apoptosis-

CC committing proteins will, Nip2 and Nip3 (W00997-99). 2 Motifs

CC (W01003-04) on Bcl-2 were identified that are essential for

interaction with the Nip proteins. These motifs show homology

CC to motifs (W01005-06) identified on the adenovirus E1B 19K
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         48 ffssgpghtphpaasr-dpvartsplgtpaapgspvppvvhltlrgagddfsrryrrdfa 106
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   107 emssqlhltpftargcfatvveelfrdgvnwgrivaffefggvmcvesvnremsplvdni 166

Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis. Truncated Cdn-1 derivatives given in R77879-81 were used to test the effects of deleting the N-terminal sequences of Cdn-1
                                                                                     Disclosure; Fig.11; 66pp; English.

Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis. Deletion of the N-terminal 70 amino acids of Cdn-1 improved this activity, suggesting that small, truncated Cdn-1 molecules may be
nucleic acid sequences encoding Cdn apoptosis modulators - and

Inducing or preventing death of T cells by bcl-XL protein regulation
The four case survival of HIV infected cells or to
The wised to increase survival of HIV infected cells or to
The wise of the camene responses in immune diseases
Disclosure; Page 52-53; 76p; English.
This is the sequence of a human bcl-XL protein, which protects
Thymphorytes against cell death. A splice variant form, bcl-XS,
acks a stretch of 63 amino acids, and is a dominant negative
cequlator of bcl-XL function. The gene may be modified to
facilitate interaction with antagonistic Bad protein, by modification of the
Bcl-2 homology domains BHI and/or BH2. The bcl-XL gene may be
intraduced into T-cells in vivo or ax vivo via gene transfer using
a vector for HIV infection gene therapy, to ougment intracellular
bcl-XL protein levels and protect from cell death. A corresponding
contisence of the correspondence contisence of the cape of the corresponding contisence of the corresponding contisence of the corresponding contisence cell death (e.g. apoptosis) and
contisence of correspondence cell death (e.g. apoptosis) and
corresponding the immune response in a T-lymphocyte population.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         83 maavkqalreagdefelryrrafsdltsqlhitpgtayqsfeqvvnelfrdgvnwgriva 142

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding apoptosis regulating proteins - useful for diagnosing and treating immune disorders, malignancies, etc.
Example 8: Page 33-34; 60pp; English.
The 42-8 mutant (W01019) of the Dc1-2 oncogene product (W01018)
lacks amino acids 42-48 of the native protein. This and other Bc1-2 mutants (see also W01020-21) were used in a two hybrid assay
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18-DEC-1996 (first entry)
Apoptosis-blocking protein Bcl-2 mutant 42-8 (del42-48).
Apoptosis-regulating protein; Bcl-2; oncogene; tancounts ElB 19% protein; cell death; cancer; tumour; immune disorder; diagnosis; therapy; BiplA; Bipl3; Bip15; NIP1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ~

Nucleic acids encoding apoptosis regulating proteins - useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diagnosing and treating immune disorders, malignancies, etc.
Example 8; Page 32-33; 60pp; English.
The bcl2 oncogene product (W01018) enhances the survival of haematopoietic B and T cells by blocking apoptosis induced by divorse agents. Its activity is similar to that of the 19k protein (W01010) of adenovirus Elb. 3 Novel proteins. Bipla, Bipl3 and Bip5 (W01000-02), that specifically interact with W01019-21) shows the apoptosis-regulating Nip proteins (see also W00099-99) associate with Bcl-2 at specific sites (see also W0109-19) associate with Bcl-2 at specific sites (see also W01003-04) that show homology to motifs (W01005-06) on 19K.
              regulating proteins Nipi, Nip2 and Nip3 (W00997-99). The Nip Proteins were unable to interact with mutent 42-8. The site of deletion in this mutent corresponds to a motif (see also W01003) on BC1-2 essential for interaction with Nip proteins. A second binding motif (W01004) of BC1-2 was also identified, and both show homology to motifs (W01005-06) found on the 19K protein (W01010) of adenovirus Elb.
                                                                                                                                                                                                                                                                                                                                                                                  18-DEC-1996 (first entry)

Wethods for producing and identifying mutant bcl-2 proteins -
That lack death repressor activity and/or lacks binding to Bax.

For that lack death repressor activity and/or lacks binding to Bax.

By Disclosure; Page 40; 133pp; English.

The sequences given in R71404.05 represent the human bcl-2 alpha and complete and a proteins respectively. bcl-2 is encoded by a proto-oncogene and is capable of inhibiting apoptosis in many hematopoletic cell systems.

Col-2 is a 26 kD membrane-associated cytoplasmic protein and is thought coffunction by enhancing the survival of hematopoletic cell systems.

Col-2 is a 26 kD membrane-associated cytoplasmic protein and is thought coling rather than directly promoting proliferation of these cell cycle coling rather than directly promoting proliferation of these cell cycle types. bcl-2 has not been shown to directly promote cell cycle progression nor does it necessarily alter the dose reponse to limiting a late of protein, Bax. Overexpressed Bax accelerates apported; cell death concentrations of IL-3. bcl-2 has been shown to form heterodimers with also acts to counter the death repressor activity of bcl-2. Therefore, calso between bcl-2 and Bax determines cell survival or death components to be a proportic stimulus. The invention gives a mutant form of bcl-2 in which there is at least one amino acid substitution or deletion collowing an apoptotic stimulus. The invention gives a mutant form of bcl-2 in which there is at least one amino acid substitution of bcl-2 in usaful in cancer therapy, controlling contexpended to bcl-2 is useful in cancer therapy, controlling contexpended and diagnosis of immunodeficiency diseases, including Albert and element and diagnosis of immunodeficiency diseases, including Albert and element and ischaemic cell death.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       54 APADPEMVTLP-LQPSSTMGQVGRQLAIIGDDINRRYDSEFQTMLQHLQPTAENAYEYFT 112
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         tvveelfrdgvnwgrivaffefggvmcvesvnremsplvdnialwmteylnrh-lhtwig 190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tpaapgaaagpalspvppvvhla--lrqagddfsrryrgdfaemssqlhltpftargrfa 131

MATCHEBERY D., NONEZ G., MILLIMAN C., SCHREIBER R.D., KORSMEYER S.J.;
NATURE 348:334-336(1990).
-!- FUNCTION: PROLOGES THE SURVIVAL OF HEMATOPOIETIC CELLS IN THE
ABSENCE OF REQUIRED GROWTH FACTORS AND ALSO IN THE PRESENCE OF
VARIOUS STIMULI INDUCING CELLULAR DEATH. BLOCKS APOPTOSIS. MIGHT
FUNCTION IN AN ANTIOXIDARY PACHWAY TO PREVENT APOPTOSIS. MIGHT
FUNCTION IN AN ANTIOXIDARY PACHWAY TO PREVENT APOPTOSIS AT SITES
OF FREE RADICAL GENERATION SUCH AS MITOCHONDRIA.
-!- SUBCELLULAR LOCATION: MITOCHONDRIAL INNER MEMBRANE.
-!- TISSUE SPECIFICITY: EXPRESSED IN A VARIETY OF TISSUES.
-!- DISSEASE: INVOLVED IN FOLLICULAR LYMPHOMA (FL) (ALSO KNOWN AS TYPE
II CHRONIC LYMPHATIC LEGREMAIN BY A CHROMOSOMAL TRANSLOCATION
TICHAS (14.18) (Q32:Q21) WHICH INVOLVES BCLZ AND IMMUNOGLOBULIN GENE

NUCLEIC ACIDS RES. 20:4187-4192[1992).

-1- FUNCTION: PROLONGS THE SURVIVAL OF HEMATOPOIETIC CELLS IN THE ABSENCE OF REQUIRED GROWTH FACTORS AND ALSO IN THE PRESENCE OF VARIOUS STIMULI INDUCING CELLULAR DEATH. BLOCKS APOPTOSIS. MIGHT FUNCTION IN AN ANTIOXIDARY TO PREVENT APPOPTOSIS AT SITES OF FREE RADICAL GENERALION SUCH AS MITOCHONDRIA.

-1- SUBCELLULAR LOCATION: MITOCHONDRIAL INNER MEMBRANE.

-1- TISSUE SPECIFICITY: EXPRESSED IN A VARIETY OF TISSUES.
                                                                                                                                                                                                                        1; Gaps
